

## Integrating the Supply Chain

Integrating the Supply Chain into an Enterprise's current operations has many benefits for all participants including: Shippers, Suppliers, Carriers, Distribution Centers, 3PL's, Sea Ports and Terminal Operators. Integration and the attendant automation minimizes errors, reduces costs, shortens lead times, promotes better relationships and provides better tracking and performance metrics. Maximizing these benefits requires Enterprises to electronically interchange AND inter-process business data. The interchange must be secure, automatic, in real-time and assured.

Corvedia's Secure Easy IM provides all these benefits and is much simpler to implement, easier to operate and less expensive than common alternatives.

Data in transit is automatically encrypted based on Corvedia's patented key-exchange technology that provides the strongest commercially available encryption. Encryption is much stronger and easier to use than the commonly used encryption based on the Public Key Infrastructure (PKI).

Corvedia's Any-to-Any Conversion Service enables each Enterprise to utilize their own standards and data formats when Interchanging and inter-processing data. Secure Easy IM supports standard EDI messages as well as XML, CSV files, private formats and PDF's. Integration with existing applications is seamless utilizing Corvedia's robust Application Program Interface (API) facilities.

Instant Send/Receive capabilities provide for the real-time interchange of data. On-line tracking with time-stamps enables each Partner to verify sending and receipt of all messages.

One Secure and Easy connection to Corvedia can connect you with all your Trade Partners regardless of their preferred mode of communication: FTP, FTPs, sFTP, AS2, VAN or even email.
